

MOHAMED SENATOR

Infrastructure & Automation Engineer | Windows | PowerShell | GCP | Terraform

Algiers, Algeria | +213 541 176 852 | mohamed.senator@icloud.com
linkedin.com/in/mohamedsenator | github.com/s3nafps | mohamedsenator.vercel.app

TECHNICAL SKILLS

Systems & Identity: Windows Server, Active Directory, Group Policy, DNS, DHCP, Microsoft 365, Exchange, Teams

Automation & DevOps: PowerShell, Bash, Go, Docker, Docker Compose, Terraform, Git, GitHub Actions, CI/CD

Cloud & Platforms: Google Cloud Platform, Compute Engine, VPC, IAP, Load Balancing, GKE, Kubernetes, Cloud NAT

Network & Security: FortiGate, FortiWeb, FortiMail, VPN, VLANs, PKI, endpoint protection, vulnerability patching

Operations: Linux, Caddy, n8n, PostgreSQL, Uptime Kuma, GLPI, ServiceDesk Plus, ITIL practices, incident management

PROFESSIONAL EXPERIENCE

Autorité Gouvernementale de Certification Électronique (AGCE) | Algiers, Algeria

IT Support - Infrastructure & Automation

Feb 2025 - Present

- Support Windows, network, and security infrastructure within a regulated, air-gapped environment underpinning national electronic certification services.
- Built and deployed Net-Ops-Dashboard, a PowerShell diagnostic tool containerized with Docker to centralize recurring network and system health checks.
- Developed reusable PowerShell modules for FortiWeb administration using session- and cookie-based authentication, standardizing repetitive security tasks.
- Troubleshoot escalated connectivity, authentication, endpoint, and security-appliance incidents; document root causes and recovery procedures.
- Collaborate with security teams on infrastructure audits, vulnerability remediation, and critical patch deployment.

Agrofilm Packaging | Algeria

Systems Administrator (Contract)

Feb 2024 - Aug 2024

- Administered Windows Server, Active Directory, Group Policy, DNS/DHCP, user permissions, and workstation lifecycle operations.
- Deployed workstation security policies through Group Policy to standardize configurations and strengthen access control.
- Standardized hardware provisioning, account setup, and technical documentation to accelerate onboarding and reduce configuration inconsistency.
- Served as the primary L2 escalation point for network outages, server-access failures, identity issues, and infrastructure troubleshooting.

Samsung Algeria | Algeria

Systems Support Specialist

Dec 2022 - Dec 2023

- Supported network and systems operations for an enterprise environment serving 500+ users while contributing to 99.9% measured network availability.
- Configured and supported Fortinet security appliances and VPN access for office-based and remote users.
- Automated recurring endpoint-maintenance tasks with PowerShell and Group Policy, reducing manual support effort.
- Created and delivered targeted user training that reduced recurring support incidents by 25%.

IRIS Electronics | Algeria

24/7 Infrastructure Monitoring

May 2022 - Nov 2022

- Monitored 24/7 manufacturing infrastructure and triaged system and network alerts affecting production continuity.
- Documented incidents and coordinated escalation and recovery actions with technical and operational teams.

Brandt Algeria | Algeria

IT Operations Specialist

Apr 2021 - Apr 2022

- Structured asset-management and incident-tracking workflows in GLPI using ITIL practices.
- Administered Microsoft Teams and Exchange services and handled user, endpoint, and service requests.

SELECTED TECHNICAL PROJECTS

AirGap-Auditor | PowerShell, Windows, Active Directory, PKI, HTML/JavaScript

- Built a zero-dependency compliance framework for hardened Windows environments with 21 workstation health and security checks covering certificates, BitLocker, firewall, updates, GPOs, endpoint security, and event logs.
- Implemented SHA-256 report integrity, JSON aggregation, offline dashboards, CSV export, and historical change detection with no external network dependencies.

State-Ops Controller | PowerShell, Windows Networking, VLANs, Fortinet

- Developed an idempotent controller for safely switching workstations between production and air-gapped VLAN profiles.
- Implemented preflight validation, adapter-state backup, automatic rollback, concurrency locking, retries, and structured Windows Event Log auditing.

GCP Fortress Architecture | Terraform, GCP, GitHub Actions, tfsec

- Designed a modular, multi-zone private web architecture using a global load balancer, regional managed instance group, auto-healing, zero public VM IPs, and IAP-only SSH.
- Added Infrastructure-as-Code validation and security scanning through GitHub Actions and tfsec.

GCP Kube Vanguard | Terraform, GKE, Kubernetes, Workload Identity, GitHub Actions

- Created a private GKE architecture with private nodes, Cloud NAT, least-privilege IAM, Workload Identity, Artifact Registry, and CI/CD automation.

Self-Hosted Automation Lab | Linux, Docker Compose, Caddy, n8n, PostgreSQL, Uptime Kuma, Cloudflare Access

- Built a hardened Contabo VPS with key-only SSH, disabled root and password login, UFW, Fail2ban, a Caddy reverse proxy, and automated backups.
- Deployed n8n with PostgreSQL and Uptime Kuma behind authenticated subdomains using Cloudflare Access.

Stacksmith | Next.js, TypeScript, Terraform/OpenTofu, Prisma, Docker

- Developed an experimental open-source, self-hostable platform that generates curated infrastructure blueprints and reviewable GitHub pull requests without giving the application permanent cloud credentials.
- Implemented deterministic Terraform file and tfvars generation, secret redaction, local validation, workspace foundations, automated tests, and Docker deployment.

CERTIFICATION & EDUCATION

Google Cloud Associate Cloud Engineer (ACE) - Google, issued February 2026

Selected Google Cloud Skills Boost labs - Terraform, IAM and service accounts, secure networking, internal load balancing, and cloud security fundamentals

Technicien Supérieur (BTS), Database Management - INSFP Baiche Abdelkader, Setif
